This cultivation schedule is intended for plants that develop flowers or fruits, starting from a one-week-old cutting or seedling.
The duration of each phase may vary depending on the species.

- * Double CANNAZYM dosage to 50 ml/10 L, if substrate is reused.
- ** Increase CANNABOOST to a maximum of 40 ml/10 L through flowering for extra strength.

For a longer growth phase, repeat the recommended dosages from Rooting period II (D6-25). For a longer flowering phase, repeat the recommended dosages from generative Phase I (W3-W5). Add CANNA PK 13/14 in the period 3-4 weeks before harvest.
